DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3 and 4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 3 recites the limitation "the force" in line 2 of the claim. There is insufficient antecedent basis for this limitation in the claim.

Claim 4 recites "removal is achieved." It is unclear what is being removed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bertsch (US 4,500,160) in view of Chase et al. (US 4,973,272).

Regarding claim 1, Bertsch discloses the invention substantially as claimed, but does not disclose slotted female ends. Chase et al. teach slots in the female end of an electrical connector to provide low contact resistance and high resistance to withdrawal for a pin of a given diameter (i.e. a rounded pin). It would have been obvious to one

having ordinary skill in the art to include the slits as taught by Chase et al. in the female end of Bertsch to ensure a secure contact with a rounded pin.

Regarding claim 2, Chase et al. teach the female end of the connector pin applying a sphincter force.

Regarding claim 3, it is inherent that the sphincter force be greater than the force required to uncouple the plug from the connector.

Regarding claim 4, Bertsch discloses removal being achieved by loosening holding screw/members 52 and tightening ejection screw/members

Conclusion
